Dataset Description

This dataset is composed of a curated collection of over 200 publicly available COVID-19 related datasets from sources like Johns Hopkins, the WHO, the World Bank, the New York Times, and many others. It includes data on a wide variety of potentially powerful statistics and indicators, like local and national infection rates, global social distancing policies, geospatial data on movement of people, and more.

Contents

| | |
|---|---|
| Distribution of Median household income..... | 3 |
| Distribution of Life expectancy..... | 4 |
| Distribution of Average mentally unhealthy days | 5 |
| Distribution of Average physically unhealthy days | 6 |
| Children health metrics in percentage | 7 |
| Excessive Alcohol usage and Driving conditions | 8 |
