```
#####
## NAME YOUR R Files
##
## This file is an introduction to R
## for SYR.
##
## Week 1
##
## It Looks at StoryTeller data
##
## Practice -
##   1) REading in csv
##   2) Looking at the data frame
##   3) Libraries
##   4) Setting a WD
##   5) installing
##   6) check for missing values
##   7) visual EDA part 1
##   8) Look at data types (str)
##
##   RENAME DATA FILES SO THEY HAVE NO SPECIAL CHAR
#####
## DO THIS ONCE
##install.packages("ggplot2")
library(ggplot2)
library(tidyverse)
```

```
## -- Attaching packages ----- tidy
verse 1.2.1 --
```

```

##   summarize
```

```
## The following object is masked from 'package:purrr':
##
## compact
```

```
## do once: install.packages("plyr")
```

```
## The following will sum all rows for each "School" and per variable in the data
## Let's save this new aggregated result as a DF
SumBySchoolDF <- ddply(MyStoryData, "School", numcolwise(sum))
(SumBySchoolDF)
```

```
## School VeryAhead Middling Behind MoreBehind VeryBehind Completed
## 1      A          0      113      450          73          154          142
## 2      B          0       84      201          14           22          125
## 3      C          0       11       39           4           12           19
## 4      D          0        3        8           2            6            3
## 5      E          0       11       56           7           15           27
```

```
## Now, I want the total number of students for A - E
## I want to sum the columns for each row
## I will start with:
```

```
(SumBySchoolDF)
```

```
## School VeryAhead Middling Behind MoreBehind VeryBehind Completed
## 1      A          0      113      450          73          154          142
## 2      B          0       84      201          14           22          125
## 3      C          0       11       39           4           12           19
